576 Optical Cable Junction Box Specifications

Overview

Scope cal fiber cable splicing, joint and protection. It is waterproof and dust proof and suitable for outdoor aerial hanged, pole unted, wall mounted, duct, buried application.

Key Takeaways

A 576-core optical cable junction box is a high-capacity, outdoor-ready fiber distribution cabinet designed for large-scale telecom and broadband networks, supporting multiple networks and providing robust protection and scalability.

Key Features

Capacity and Configuration: Supports up to 576 fiber optic cores, often organized in modular trays (12/24/48 ports per tray) for flexible splicing and distribution. Some models offer double-sided access for easier management and expansion. Compatible with SC and FC adapters, supporting mainstream ONU equipment and fusion splicing panels.

Material and Durability: Constructed from SMC (Sheet Molding Compound) composite material, which is lightweight (~38 kg) yet highly durable. Resistant to corrosion, rust, and high temperatures, outperforming traditional iron or aluminum boxes. Protection levels range from IP65 to IP68, ensuring water, dust, and extreme temperature resistance (-40°C to +85°C) for outdoor installations.

Design and Installation: Modular internal layout allows fiber splitting, patching, and splicing without full disassembly. Supports ground, wall, or pole mounting, with flexible door opening options (front, back, or double-sided) for different deployment environments. Locking options include MS864-4 imitation Cologne lock, MS712 lock, or padlocks for secure access.

Applications: Ideal for telecom operators, broadband construction teams, and property management in large residential or commercial networks. Supports multi-network integration, including China Telecom, China Unicom, China Mobile, and broadcasting networks.

Suitable for FTT

H, PON, metro, and access network cross-connections, as well as fiber cable distribution and management. Scalability and Maintenance: Many models reserve 20% extra space for future expansion, allowing module additions without replacing the entire box. Built-in direct splice units facilitate trunk and distribution cable connections, storage, and splicing.

Designed for long-term stable operation, minimizing maintenance and failure rates in high-demand environments. Cost and Performance: SMC-based 576-core boxes offer better performance at lower cost compared to iron or aluminum alternatives, with improved thermal stability and longevity. In summary, a 576-core standard optical cable junction box is a robust, high-capacity solution for modern fiber optic networks, combining durability, multi-network compatibility, modularity, and scalability to meet the demands of large-scale telecom and broadband infrastructure projects.
