All tools for cutting optical cables

Overview

Fiber Optic Tools Guide – Choosing the Right ToolsThis article provides a complete guide on how to choose the right fiber optic tools for professional inst.

Key Takeaways

Fiber optic cables are cut using specialized tools such as fiber optic strippers, Kevlar cutters, diagonal cutters, and precision cutting scissors to ensure clean, damage-free cuts. Key Tools for Cutting Optical Cables1. Fiber Optic Strippers Fiber optic strippers are designed to remove the protective coatings and buffer layers from optical fibers without damaging the glass core.

They allow technicians to expose the fiber for splicing or termination while maintaining signal integrity and preventing cracks or breaks in the fiber (Jonard Tools). 2. Kevlar Cutters Kevlar or aramid yarn strength members inside fiber optic cables require specialized Kevlar cutters.

These scissors are made from hardened steel with serrated blades to prevent slippage and ensure precise, clean cuts. Regular scissors are unsuitable as they dull quickly and may crush the fibers (Lanshack). 3.

Diagonal Cutters / Precision Flush Cutters Diagonal cutters or precision flush cutters are used to trim optical fibers cleanly. Their sharp blades allow for crush-free cuts, which is critical for maintaining the fiber's performance and signal quality. These cutters are often ergonomically designed for comfort during repeated use (Jonard Tools, trueCABLE).

4. Fiber Cable Cutting Scissors Specialized fiber cable cutting scissors, such as the CFS-2 model, are used to cut both the fiber and its cladding. They often feature multiple holes for stripping different layers of the fiber, allowing technicians to quickly and accurately prepare fibers for splicing or termination without damaging the core (Holight Optic).

5. Jacket Removers / Cable Strippers While not directly cutting the fiber, jacket removers or cable strippers are essential for removing the outer protective jacket of the cable. They make controlled circumferential cuts around the jacket, exposing the inner fibers for further processing (Jonard Tools, Lanshack).

Summary

Cutting optical cables requires precision and specialized tools to avoid damaging the delicate glass fibers. The main tools include fiber optic strippers for coating removal, Kevlar cutters for strength members, diagonal or flush cutters for clean fiber ends, fiber cable cutting scissors for multi-layer stripping, and jacket removers for outer cable jackets. Using these tools ensures reliable connections, optimal signal transmission, and safe handling during fiber optic installation and maintenance.
