Cable tray specifications and models sample

Overview

Description: This product category covers metal cable trays and metal cable tray systems intended for field assembly and for use in accordance with Article 392 of NFPA 70.

Key Takeaways

Cable trays are available in ladder, ventilated, and solid-bottom designs, fabricated from steel or aluminum, with multiple standards and load ratings to suit industrial, commercial, and data center applications.

Types of Cable Trays

Ladder Tray: Features side rails with rungs for cable support, ideal for long cable runs and easy maintenance. Cables can enter or exit at any point, making system modifications simple (ABB, Eaton, Hubbell). Ventilated Tray: Solid bottom with perforations for airflow, reducing heat buildup while providing cable support.

Suitable for indoor and outdoor installations (ABB, Legrand).

Solid-

Bottom Tray: Provides full support for sensitive cables, preventing sagging and protecting against dust or debris. Often used in industrial environments (Eaton, Legrand).

Materials and Finishes

Aluminum: Marine-grade, corrosion-resistant, lightweight, suitable for chemical and outdoor environments. Forms a protective oxide layer that self-repairs when scratched (Eaton). Steel: Roll-formed structural steel, hot-dip galvanized for corrosion protection.

Can be pre-galvanized or coated for indoor/outdoor use. Provides high strength-to-weight ratio (ABB, Eaton). Finishes: Common finishes include gray or black powder coating, hot-dip galvanization, and anodized aluminum for durability and aesthetics (Hubbell, Legrand).

Standards and ComplianceASTM A123 & ISO 1461: Galvanization and corrosion protection standards (ABB). ANSI/NFPA 70 (NEC): Electrical safety compliance (ABB).

NEMA V

E 1-2017: Metal cable tray systems standard (ABB).

U

L Certification: Ensures safety and performance for commercial and industrial installations (Legrand).

C

E Marking: Compliance with European directives for electrical safety (Legrand).

Load Ratings and Design Considerations

Load Class: Defines the maximum weight a tray can carry over a specific support span. Ladder trays are rated for light, medium, or heavy loads depending on rung spacing and material thickness (Hubbell). Support Spacing: Reducing the number of supports can lower installation costs while maintaining structural integrity (Eaton).

Cable Management: Trays allow for easy cable routing, strain relief, and grounding, with modular fittings for bends, tees, and transitions (ABB, Eaton, Hubbell). Available Models and CatalogsABB T&B Cabletray: Offers ladder, ventilated, and solid-bottom trays in steel or aluminum, with CAD and BIM models available for design integration (ABB).

Eaton B-

Line Series: Metallic cable ladder systems with submittal builder tools for straight sections, fittings, and accessories; supports 2D/3D CAD and BIM formats (Eaton). Hubbell NEXTFRAME® Ladder Tray: Tubular steel construction, modular system for floors, walls, ceilings, and racks; available in gray and black finishes (Hubbell). Legrand Cable Trays: Comprehensive technical guide with European and US standards compliance, including CE and UL certifications; offers solid, ventilated, and ladder trays (Legrand).

Design Tools and ResourcesCAD/BIM Libraries: Most manufacturers provide downloadable CAD and BIM models in multiple formats for integration into project designs (ABB, Eaton, Legrand). Submittal Builders: Online tools allow filtering by tray type, material, size, and load rating to generate project-specific specifications (Eaton). Cable trays are a versatile solution for structured cable management, offering modular design, compliance with international standards, and a range of materials and finishes to meet industrial, commercial, and data center requirements.
