Key Takeaways

Fireproof cable trays in East Asia typically range from $0. 32 to $12 per unit, depending on material, design, and fireproofing treatment.

Price Range and Factors

The cost of fireproof cable trays varies widely based on material, structural design, and fire-resistance performance. Common materials include: Carbon steel with galvanization or intumescent coatings: $0. 32–$12 per unit, offering fire resistance up to 1000°C for 90–120 minutes and meeting standards like UL 1724 and BS 476.

Stainless steel (grades 304/316): Higher initial cost due to inherent fire and corrosion resistance, suitable for harsh environments like chemical plants or coastal areas. Aluminum: Lightweight and corrosion-resistant, moderately priced. Fiberglass Reinforced Plastic (FRP): Non-metallic, highly resistant to corrosion and electrical conductivity issues, often customized in ladder, solid-bottom, or channel types; pricing depends on size and quantity.

Supplier and Purchase Options

Wholesale and factory-direct: Many East Asian suppliers, including China and Indonesia, offer competitive pricing for bulk orders, often with OEM customization. Minimum order quantities: Some suppliers require as few as 10 units for wholesale pricing. Customization: Prices can vary significantly if trays are tailored for specific widths, lengths, or fireproofing standards.

Applications Affecting Cost

Fireproof cable trays are used in high-risk infrastructure, including tunnels, skyscrapers, industrial facilities, and public transit systems. Trays designed for emergency systems (fire alarms, smoke extraction, emergency lighting) may carry a premium due to reinforced joints, high-strength mounting hardware, and specialized coatings.

Summary

In East Asia, standard fireproof cable trays start around $0. 32 per unit, while high-performance or stainless steel trays can reach $12 or more per unit. Bulk purchases, factory-direct sourcing, and material selection are key factors influencing the final price.
