# Exterior of Lighting Distribution Box

## Overview

Outdoor Cut Outs and Distribution Boxes Lucy Electric's range of low voltage outdoor cut outs and distribution boxes is engineered for durability, safety.

## Key Takeaways

A lighting distribution box typically features a robust, weather-resistant exterior with accessible mounting and cable entry points for safe and flexible installation.

### Exterior Design and Materials

Lighting distribution boxes, such as those from flex7, are commonly constructed from tough anodised aluminium, making them highly durable and resistant to environmental conditions. The exterior is designed to protect internal electrical components while providing easy access for wiring and maintenance. Many boxes include a single removable captive screw to open the wiring compartment, ensuring both security and convenience.

### Mounting and Installation

Externally, these boxes are equipped with steel snap-fit mounting clips and M5 machine screws with lock nuts, allowing secure attachment to trunking, cable trays, or standard conduit/BESA boxes. Some models also include a supporting end bracket for additional stability. The design ensures compliance with wiring regulations, such as IET wiring regulation 521.

### Cable Entry and Accessibility

The exterior often features multiple cable entry points, providing flexibility for different installation scenarios. This allows installers to route cables efficiently while maintaining a neat and organized setup. The boxes are designed to accommodate various conductor sizes, typically 3 x 2.

5mm², 2 x 4mm², or 1 x 6mm², with clearly labelled in-line terminals.

### Visual Appearance

From the outside, a lighting distribution box appears as a compact, rectangular enclosure with a smooth or slightly textured finish. Some models may include warning labels or danger signs to indicate electrical hazards. The exterior is generally minimalistic but functional, emphasizing durability and ease of installation.

### Additional Features

Certain lighting distribution boxes, like the flex7 range, allow for expansion by connecting additional boxes, providing extra outlets without replacing the main unit. This modular approach is reflected in the exterior design, which accommodates plug-in expansion units seamlessly. In summary, the exterior view of a lighting distribution box combines robust construction, secure mounting, multiple cable entry points, and user-friendly access, making it suitable for both indoor and outdoor electrical installations.
