# Fiber Optic Patch Cord Categories

## Overview

SOPTO A deep-dive into the technology of fiber patch cords. Learn about Single-mode vs. Multimode, LC/SC/MPO connectors, UPC/APC polish types, and critical.

## Key Takeaways

Fiber optic patch cords are categorized by fiber mode, connector type, and jacket specifications, each suited for specific network applications. Fiber Mode CategoriesSingle-Mode (SM) Patch CordsCore diameter: ~9µmSupports long-distance transmission (up to tens of kilometers)Lower attenuation, higher bandwidth potentialCommon in telecom, long-haul networks, and enterprise backbonesTypical standards: OS1, OS2, G. 657A1/A2 for bend-insensitive applications Multimode (MM) Patch CordsCore diameter: 50µm or 62.

5µmSupports short-distance transmission (up to 500m at high speeds)Higher modal dispersion, lower bandwidth over distanceCommon in data centers and LANsTypical standards: OM1 (orange), OM2 (orange), OM3 (aqua), OM4 (aqua), OM5 (lime green or violet), Connector Type CategoriesLC (Lucent Connector): Small form factor, duplex, high-density, widely used in modern data centersSC (Subscriber Connector): Larger, push-pull, common in FTTH and CATVFC (Ferrule Connector): Screw-on, legacy telecom and lab applicationsST (Straight Tip): Bayonet mount, legacy networksMPO/MTP: Multi-fiber connectors (8/12/16/24/32/48 fibers), critical for 40G/100G/400G parallel opticsMU, MT-RJ, E2000, DIN: Specialized connectors for high-density or specific telecom applications Jacket and Environmental CategoriesPVC: Standard indoor use, not suitable for air ductsLSZH (Low Smoke Zero Halogen): Emits minimal smoke/toxic gas, ideal for high-safety areasOFNR (Riser): Vertical shafts between floorsOFNP (Plenum): Fire-resistant, safe for air ductsArmored / Outdoor / Waterproof: For harsh environments, FTTA, or outdoor installations Other ClassificationsSimplex vs Duplex: Simplex: One fiber, one-way transmissionDuplex: Two fibers, two-way transmission (Tx/Rx), most Ethernet and PON links use duplexUniboot / High-Density: Single cable with dual fibers for space-saving in dense racksPre-terminated Multi-core: Multi-fiber assemblies for rapid deployment in data centers Practical Selection TipsUse single-mode for long-distance or backbone links; multimode for short intra-data center connectionsMatch connector type to equipment ports (LC for modern switches, MPO for high-speed parallel optics)Choose jacket type based on installation environment (indoor, plenum, riser, outdoor)Consider duplex/simplex and fiber count for network topology and density requirements By understanding these categories, network designers can select the appropriate fiber optic patch cord to ensure optimal performance, low signal loss, and future scalability.
