Fiber optic cable core wire termination

Overview

Fiber Optic cable termination is the addition of connectors to each optical fiber in a cable. These terminations must be of the right style, installed in a. Fiber optic joints or terminations - where cables are terminated - are made two ways: 1) connectors that mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear (left) or 2) splices which create a permanent joint between the two fibers (right). It explains the step-by-step processes, essential tools, and best practices to help technicians achieve low-loss, high-reliability optical connections in. Fibre optic termination is the process of preparing the end of a fiber optic cable so it can connect to network equipment, another cable, or a patch panel.
