Galvanized cable trays are made of cold-dip galvanized steel

Overview

At its core, a galvanized cable tray is a steel-based cable support system that has been coated with zinc to protect against rust and oxidation. This protective layer makes the tray far more resistant to corrosion than untreated steel and extends the system's lifespan in. Detail of hot-dip galvanized steel cable trays installed in a demanding industrial environment. In many industrial. Dry indoor rooms should use pre-galvanized (PG) steel. The wrong one is the most common error, which results in rust showing itself much earlier than. Heavy duty cable trays and cable ladders are manufactured from pre-galvanized, electro-galvanized, or hot-dipped galvanized sheet metal, designed to meet ideal environmental working conditions for indoor and outdoor use in commercial or industrial environments with high cable density. Zinc pro-vide sacrificial protection, which means that it cor-rodes while.
