High-Temperature Resistant Multiwavelength Light Sources In Stock

Overview

High Temperature LED Lighting for Extreme Heat, up to Engineered for hot, punishing environments where ordinary LEDs fail. These high temperature LED flood.

Key Takeaways

High-temperature multiwavelength LED emitters are available in hermetic packages covering UV to MWIR spectra, suitable for demanding industrial and scientific applications.

Industrial High-

Temperature LED Lighting

For environments with extreme heat, such as steel mills, foundries, glass manufacturing, and power plants, high-temperature LED lights are engineered to withstand sustained ambient temperatures from 176°F (80°C) up to 392°F (200°C). These fixtures often feature: Robust high bay or linear form factors for mounting above production floors or near furnaces. IP66-rated, UL-listed, and DLC Premium certifications for durability and safety.

Heat management systems to prevent premature LED failure in high-temperature zones. Options for floodlight or spot illumination with narrow or wide beam characteristics. Suppliers like McMaster-Carr offer a wide selection of high-temperature lights with same- or next-day delivery, providing flexibility for urgent industrial needs.

Multiwavelength LED Emitters

For applications requiring multiple wavelengths, Marktech Optoelectronics provides emitters covering UV, visible, NIR, SWIR, and MWIR ranges (235 nm to 4300 nm) in a single hermetic package. Key features include: Multiple chips in one package, each independently addressable for simultaneous multiwavelength operation. Integrated photodiode detectors for real-time monitoring and feedback.

Hermetic packaging to protect against environmental factors, enhancing reliability in harsh conditions. Applications include non-dispersive spectroscopy, medical diagnostics (oximetry, co-oximetry, PPG, OCT), fluorescence, colorimetry, and multi-parameter sensing. Available in various package types such as TO-18, PLCC, TO-5, and surface mount, allowing integration into compact or high-power systems.

Considerations for Combining High-

Temperature and Multiwavelength RequirementsWhile standard multiwavelength emitters are not always rated for extreme industrial temperatures, hermetic packaging and robust thermal management can improve their tolerance to elevated heat. For applications requiring both high-temperature resistance and multiwavelength output: Select hermetic or heat-resistant packages to protect LEDs from thermal stress. Ensure adequate heat sinking or active cooling to maintain operational stability.

Verify the wavelength stability under elevated temperatures, as some LEDs may shift emission spectra when heated. By combining industrial high-temperature LED technology with multiwavelength emitters, it is possible to achieve reliable performance in demanding environments, whether for industrial inspection, spectroscopy, or advanced photonics research.

Multi-Wavelength LEDs - Mightex

Multi-wavelength collimated, fiber- or lightguide-coupled LED sources. Simulateously multi-wavelength output or fast switching with no mechanical motion.

High-Temperature Lights | McMaster-Carr

Choose from our selection of high-temperature lights, including over 80 products in a wide range of styles and sizes. Same and Next Day Delivery.

Multi-Channel LED Light Source

CombiLED light engine combines, by dichroic mirrors, multiple high-power collimated LEDs, into a single output. The output can be customized to be multimode fiber, a fiber-optic bundle, or a liquid light

SWIR Light Sources | Infrared Illumination | Edmund Optics

SWIR illumination solutions for imaging applications. Ideal for enhancing contrast in industrial, scientific, and machine vision applications. Shop infrared light sources at Edmund Optics.

6-Wavelength High-Power LED Sources

Two pre-set Chrolis light source configurations are available from stock. The six wavelengths included in each source were selected to support common

[2209.11417] High-quality multi-wavelength quantum light sources on ...

Multi-wavelength quantum light sources, especially at telecom band, are extremely desired in quantum information technology. Despite recent impressive advances, such a quantum

GAOTek Multi-Wavelength Optical Light Source

This GAOTek Multi-Wavelength Optical Light Source is a portable device which provides a single button switch operation for the following multi-wavelength output options: 650 nm, 850 nm, 1300 nm, 1310

Multi-Wavelength LEDs

Multi-wavelength collimated, fiber- or lightguide-coupled LED sources. Simulateously multi-wavelength output or fast switching with no mechanical motion.

Multi-Wavelength Laser diodes | UV-LWIR CW/pulsed | shop RPMC

Our Multi-Wavelength Laser systems provide robust, adaptable solutions for applications requiring precision across multiple spectral bands. Offering wavelengths from UV to LWIR (≈210nm to 10µm),

Our SuperNova Light Source for Co-Packaged Optics | Ayar Labs

First CW-WDM MSA-Compliant Light Source As the first optical source designed to be compliant with the CW-WDM MSA specification, our SuperNova light source can be deployed across a wide range

Fixed Wavelength Benchtop Fibre-coupled LED Light Sources

Ultra High Power Fibre Coupled: The UHP-FC Series Fibre-coupled ultra high power LED light sources are triggered by an external TTL input and are specially designed to provide strong blue, green,

Multiwavelength, Ultranarrow Line Width Emission from

Multiwavelength laser sources are indispensable in the development of quantum information, laser lighting, and laser display technologies. However,

Power stability control of a multi-wavelength LED light source using ...

Any light source exhibiting temperature-dependent spectral shifts—such as laser diodes or broadband sources—can benefit from this approach, as long as the optical path includes dichroic

© 2026 CJC FIBRE CONSULTANTS - All rights reserved

High Wavelength Count Laser Sources for WDM CMOS Optical

We demonstrate a CW-WDM MSA compliant multi-wavelength source driving an error-free WDM CMOS optical link. The SuperNova™ operates up to 100°C and outputs 64 optical carriers (8 wavelengths x

6-Wavelength High-Power LED Sources

Compared to conventional non-LED sources like halogen and gas discharge lamps, these mercury-free 6-wavelength light sources offer many advantages such as

Broadband Light Sources with High Power and Brightness

Plasma light sources, on the other hand, enable much higher temperatures by generating a plasma and are therefore predestined for the generation of intense UV radiation and high luminances.
