

How far is the long-span bridge in Yemen

Overview

This is a list of the world's longest that are more than 3 kilometers (1.9 mi) in length sorted by their full length above land and water. The main span is the longest span without any ground support.

Key Takeaways

The longest existing bridge in Yemen has a span of 180 meters, while a proposed international suspension bridge could reach 20 miles if built.

Existing Bridges

The longest operational bridge in Yemen is a multi-span panel (Bailey-type) bridge supplied by Waagner-Biro, installed on key routes including the port city of Aden. These bridges were designed with spans of 30. 48 meters (100 feet) each, and some were combined using junctions to reach a total length of 180 meters for the longest bridge.

The width of these bridges is 7. 2 meters, accommodating two traffic lanes. Other notable bridges include the Shaharah Bridge, a historic masonry footbridge with a span of 20 meters, famous for its architectural and cultural significance.

Proposed Long-Span Bridge

There is a planned suspension bridge project intended to connect Yemen with Djibouti across the Bab-el-Mandeb Strait. This ambitious project envisions a 20-mile (approximately 32 kilometers) suspension bridge, with towers reaching 700 meters in height to accommodate the strait's depth of up to 300 meters. However, this project remains in the planning stage and has not been approved or constructed, so it does not currently exist.

Summary

Longest existing bridge in Yemen: 180 meters (multi-span panel bridge) Historic bridge: Shaharah Bridge, 20 meters Proposed international bridge: 20 miles (32 km), not yet built These details provide a clear picture of both current and planned long-span bridges in Yemen, distinguishing between operational structures and ambitious future projects.
