How to ground the copper plate of the distribution box

Overview

26 mm 2 (10 AWG) ground wire must be used, and in all other markets a 6 mm 2 must be used. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. To employ a grounding plate, one typically attaches a conductor - commonly a wire made of copper or aluminum - to the plate, which is then integrated into the grounding system of an electrical setup. Should an electrical fault occur, the current will pass through the conductor to the grounding. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Electrical system safety increases through.
