How to turn fiber optic internet back on if it s turned off using a router

Overview

Restart or Factory Reset a GFiber DeviceDiscover how to easily restart or factory reset your GFiber device with our step-by-step guide for a seamless inter.

Key Takeaways

To restore fiber optic internet, restart both your router and the Optical Network Terminal (ONT), check all cable connections, and ensure proper network settings. Step 1: Power Cycle Your RouterUnplug the router's power cable and wait about 30–60 seconds to allow residual power to drain. Reconnect the power and wait 3–20 minutes for the router to fully reboot.

Most routers have LED indicators that show when the device is ready. Step 2: Check the Optical Network Terminal (ONT)The ONT converts fiber signals into electrical signals for your devices. If your internet is still off after restarting the router, power cycle the ONT: Unplug the ONT's power cord.

Wait 30 seconds. Plug it back in and allow a few minutes for it to reconnect to your ISP.

If the ON

T has a reset button, you can press and hold it for 10–15 seconds to restore default settings, but only do this if a simple power cycle doesn't work. Step 3: Verify Cable ConnectionsEnsure all Ethernet cables are securely connected: Router WAN port to ONT.

Router LA

N ports to devices if using wired connections. Replace any damaged or worn cables with CAT5E or higher. Step 4: Check Router SettingsSome routers may require manual configuration: Log in to the router's web interface.

Navigate to Advanced > Internet > Internet Port Negotiation Speed and set it to 100Mbps full duplex if the internet light remains off. Confirm that the router is set to obtain an IP address automatically from your ISP. Step 5: Test Your ConnectionOnce the router and ONT are powered on and cables are secure, run a speed test or try browsing to confirm the internet is active.

If issues persist, contact your ISP for further assistance, providing your router and ONT model details. Following these steps usually restores fiber optic internet when it has been turned off via a router.
