Huawei Core Switch Reset

Overview

Step-by-step guide to factory reset Huawei switches, including CE/S series reset methods, button reset, bootrom hard reset, and password recovery. Includes FAQs and CLI examples for IT admins.

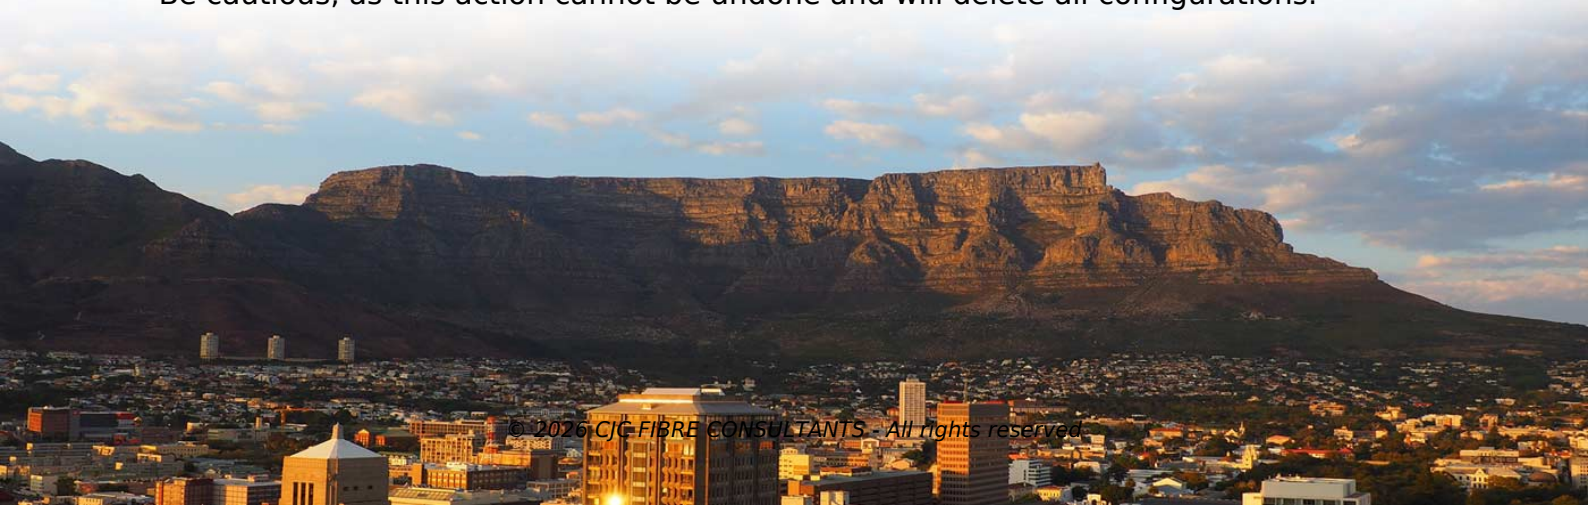

Key Takeaways

To factory reset a Huawei core switch, you can either press and hold the PNP button for more than 6 seconds or use the command line interface (CLI) to execute the reset command. Method 1: Using the PNP ButtonLocate the PNP Button: Find the PNP button on your Huawei switch. Press and Hold: Press and hold the PNP button for more than 6 seconds.

This action will restore the switch to its factory default settings and automatically restart the device. Method 2: Using the Command Line Interface (CLI)Log in to the Switch: Access the switch through the console port or via Telnet/SSH. Note that if you use Telnet or SSH, your connection will be lost after the reset.

Execute the Reset Command: In the user view, run the following command: CodeCopyreset factory-configuration This command will clear all service configurations and data files, restoring the switch to its factory default settings. Confirm the Action: You may be prompted to confirm the action. Type Y to proceed.

Be cautious, as this action cannot be undone and will delete all configurations.

Important Considerations

Backup Configurations: Before performing a factory reset, it is highly recommended to back up your current configuration. You can do this by running the command display current-configuration and saving the output to a file. Initial Password: After a factory reset, the password for logging in through the console port will revert to the initial default password.

Make sure you have this information available. Impact on Network: If the switch is part of a stack, resetting one switch can affect the entire stack. It is advisable to remove stacking configurations before performing the reset.

By following these steps, you can successfully reset your Huawei core switch to its factory settings. Always ensure that you have backed up any important configurations before proceeding with the reset.
