Indoor distribution box model specifications and dimensions

Overview

Data Sheet: Indoor Distribution Boxes Family The Indoor Distribution boxes family serve as a connection and branching solution for indoor use accommodating.

Key Takeaways

Indoor distribution boxes are available in various sizes and capacities, typically made of steel with lockable doors, supporting 100 to 1340-pair modules, and conforming to IP20 protection standards.

General Specifications

Indoor distribution boxes are designed for indoor use and serve as connection and branching points for telecommunication or electrical systems. They are typically made of lightweight mild steel and finished in grey (RAL 7032 or RAL 7035). The boxes feature removable and lockable doors with 180-degree access, which can be hinged on either side depending on installation requirements.

They are rated IP20 according to DIN 450050, providing protection against solid objects larger than 12 mm but not against water ingress.

Capacities and Module Support

Distribution boxes are grouped into sub-categories based on capacity: 510 Box: Supports 340-pair modules520 Box: Supports 680-pair modules530 Box: Supports 1020-pair modules540 Box: Supports 1340-pair modules These boxes are compatible with LSA-PLUS® series 2 10-pair modules and include stainless steel backmount frames to support 100-, 200-, or 400-pair modules. Jumper rings are provided for organized cable management, and some configurations allow for overvoltage protection upgrades.

Dimensions and Mounting

Indoor distribution boxes come in a range of length, width, and height dimensions depending on the model and number of ways (1-way to 36-ways). Standard boxes are designed for wall mounting, though mounting hardware is typically not included. The boxes are engineered to accommodate document wallets and other accessories for installation and maintenance.

Additional Features

Lockable doors for securityRemovable doors for easier installation180-degree access for maintenanceCompatibility with a wide range of LSA-PLUS® accessoriesEarth protection components must be installed according to standard guidelines Considerations for SelectionWhen selecting an indoor distribution box, consider: Number of pairs or devices to be accommodatedFuture expansion needsMounting location and space constraintsRequired protection rating (IP20 for indoor use)Compatibility with modules and accessories By choosing the appropriate size and specifications, installers can ensure efficient cable management, secure connections, and compliance with safety standards.
