Is a splitter or a mesh better

Overview

A mesh system ensures seamless coverage and no drop-offs during video calls. If you need a quick, affordable solution for a small area, a Wi-Fi extender. WiFi extenders and mesh networks both promise better coverage, but they take very different approaches. A poor WiFi signal doesn't necessarily mean a bad router. Figuring out which path to take depends on your home layout, how many devices you run, and what kind of performance you. Before comparing mesh Wi-Fi vs. This guide breaks down both options in simple terms, looks at the key tradeoffs, and helps you figure out which one makes the most sense for your home. Mesh networks create a strong signal across your entire home. Thinking why, when we put mesh, do we make mesh 1 the 'router' so therefore mesh might perform better then repeater. Repeaters require you to manually change AP. Each device in the mesh network is known as an “access point” or “node.
