

# Is the EOC terminal box a set-top box

## Overview

Disclosed is a set top box internally provided with an Ethernet transmission terminal based on a coaxial cable. It allows network connectivity through existing coaxial infrastructure by using a coaxial connector for the coax network, and RJ45 Ethernet ports for connecting to local network devices. The Ethernet Over Coaxial Converter (EOCC) is an alternative solution to external trunking for customers who want to enjoy Fibre TV in instances where the Termination Point (TP) is more than 2m away or when there are no available data points in other rooms. How does EOCC work?

EOCC are networking. EOC (Ethernet Over Coax) is network that transmits Ethernet signal in coaxial-cable between two points or among multiple points, which carries Ethernet network by coaxial-cable in user's home and provides return channel for interactive services like digital television. The Institute of Electrical and Electronics Engineers (IEEE) maintains all official Ethernet standards in the IEEE 802 family.
