Manufacturer of 1200mm deep telecommunications shelters

Overview

A&M Telecom Shelters is an expert in the industry of high-quality, cost-effective, and reliable telecom shelters.

Key Takeaways

Several manufacturers offer customizable telecommunications shelters that can be engineered to a depth of 1200mm, including Enviro Buildings, TMCO Group, Module X Solutions, and Shelter Works.

Key Manufacturers and Capabilities

Enviro Buildings specializes in highly insulated telecom shelters designed for ground site applications in extreme environments. Their shelters are customizable to meet specific size requirements, including depth, and are engineered to protect sensitive telecom equipment from harsh weather conditions.

TMC

O Group provides prefabricated, weather-resistant enclosures for telecom equipment. Their manufacturing facility allows for flexible production, enabling shelters to be tailored to site-specific dimensions and logistical constraints, making them suitable for a 1200mm depth requirement. Module X Solutions designs and manufactures modular and precast steel or concrete shelters.

They offer custom hybrid designs and can engineer shelters to meet unique project specifications, including weight restrictions and transport limitations. Their shelters can be configured to precise dimensions, including 1200mm depth, while maintaining structural integrity and compliance with industry standards. Shelter Works produces engineered-to-order fiberglass telecom shelters using FiberBeam™ Technology.

These lightweight, insulated, and weather-tight shelters can be customized for specific dimensions, including 1200mm depth, and are ideal for remote or rooftop installations where weight and transport are critical considerations. Considerations for Selecting a ShelterMaterial: Options include fiberglass, steel, concrete, or hybrid constructions depending on environmental exposure and weight constraints.

Insulation and R-

Value: Important for protecting sensitive electronics in extreme temperatures. Transportability: Some shelters are designed for easy offload and transport, which may influence size limitations. Customization: Most manufacturers can tailor shelters to specific dimensions, including 1200mm depth, and accommodate additional features like fork truck pockets or RF transparency.

These manufacturers provide flexible solutions for telecom infrastructure projects, ensuring that shelters meet both environmental and operational requirements while allowing for precise dimensional specifications.
