

Many types of communication fiber optic cables

Overview

Learn about single-mode and multi-mode fiber optic cables, their components, uses, and how to choose the right type for your network needs.

Key Takeaways

Fiber optic cables are classified primarily into single-mode and multimode types, with further distinctions based on fiber count, jacket type, and specialized applications. Primary Fiber Types¹.

Single-

Mode Fiber (SMF) Single-mode fibers have a small core diameter, typically around 9 microns, allowing only one light mode to propagate. This design supports long-distance, high-speed data transmission with minimal signal loss and dispersion, making it ideal for telecommunications, internet backbones, and long-haul networks.

Multimode Fiber (MMF) Multimode fibers have a larger core, usually 50–62.5 microns, allowing multiple light modes to travel simultaneously. They are suitable for shorter distances such as within data centers or enterprise networks.

MM

is cost-effective for high-bandwidth applications over moderate distances but experiences more modal dispersion than SMF. Fiber Count and Configuration¹. Simplex Cables Contain a single fiber strand, typically used for unidirectional transmission or with bidirectional transceivers (BiDi).

They are compact and suitable for one-way communication links. 2. Duplex Cables Consist of two fiber strands—one for transmitting and one for receiving—enabling full-duplex communication.

Duplex cables are standard in most point-to-point network applications. 3. Multifiber Cables Bundle multiple fibers together, simplifying installation and management in high-density environments.

These are used in data centers and large-scale network deployments. Cable Jacket Types OFNR (Riser-rated): Designed for vertical shafts between floors; cost-effective but releases toxic gases when burned.

LSZ

H (Low Smoke Zero Halogen): Emits minimal smoke and no halogen gases, ideal for offices, hospitals, and enclosed spaces.

OFN

P (Plenum-rated): Highest fire resistance, required for air-handling spaces like ceilings and ducts.

Specialty Fiber Cables

Armored Fiber Cables: Provide extra protection against physical damage, suitable for harsh environments.

FTT

A (Fiber to the Antenna) Cables: Designed for outdoor telecom infrastructure, including 4G LTE and 5G base stations, with weatherproofing and rugged sheathing. Mode Conditioning Cables: Allow single-mode optics to operate over multimode fiber systems, reducing signal distortion.

High-

Density Cables: Use uniboot designs to reduce cable bulk and improve airflow in data centers.

Summary

Fiber optic cables are chosen based on distance, bandwidth, environmental conditions, and network architecture. Single-mode fibers are preferred for long-distance, high-speed links, while multimode fibers are cost-effective for shorter distances. Cable configuration (simplex, duplex, multifiber) and jacket type ensure safety, durability, and compliance with installation requirements.

Specialty cables address specific needs like outdoor deployment, high-density management, or mixed-mode compatibility.

Types of Fibre Optic Cable: A Comprehensive Guide

Learn about single-mode and multi-mode fiber optic cables, their components, uses, and how to choose the right type for your network needs.

Types of Fiber Optic Cables: Complete Classification & Selection Guide

The two primary categories of fiber optic cables are single-mode fiber (SMF) and multimode fiber (MMF). Single-mode fiber is designed for long-distance, high-speed transmission,

Fiber Optic Cable Types | Omnitron Systems Guide

In this guide, Omnitron Systems explores the key differences between different types of fiber, their applications, and how to select the right type of cable for your

Fiber Optic Cable Types: Single-Mode, Multimode, and Beyond – A ...

Discover fiber optic cable types, including single-mode (OS1, OS2) and multimode (OM1, OM2, OM3, OM4, OM5), indoor/outdoor variants, and how to select the best option for data centers,

Fiber Optic Cable Types Explained: Choosing the Right Fiber Cable

This guide breaks down the most common and specialized fiber optic cable types, helping you identify the best fit for your installation environment, bandwidth requirements, and safety

Fiber-optic cable

There are two main types of material used for optical fibers: glass and plastic. They offer widely different characteristics and find uses in very different applications.

Fiber Optic Cable Types: Comprehensive Guide

Explore the different types of fiber optic cables and understand which type suits your specific needs for speed, distance, and durability.

10 Types of Fiber Optic Cable Explained: Selection

Explore the top 10 fiber optic cable types for 400G/800G networks. From ADSS to MPO, learn technical specs, applications, and how to choose the right fiber for

Fiber-optic communication

Two main types of optical fiber used in optical communications include multi-mode optical fibers and single-mode optical fibers. A multi-mode optical fiber has a larger core (≥ 50 micrometers), allowing

Online Bulk Cable Company | CableWholesale

As a premier online bulk cable company, CableWholesale carries a large inventory of computer cables, USB, HDMI, fiber optic, VGA cables, and more. Shop now!

Fiber Optic Connector Types: A Beginners Guide

The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch

Fiber Optic Cable Types Explained

Our comprehensive guide to types of fiber optic cables. Learn all about the differences between single mode and multimode cables, as well as the various fiber wavelengths and standard core sizes used

What Is Fiber Optics? A Guide

Streaming a movie, making a phone call, or getting an endoscopy may seem like disparate experiences, but they share a common thread: They're connected by an invisible network

Armored Cable Guide: Types, Applications & Safety

Armored cable is a vital solution for environments where electrical or communication circuits must endure mechanical stress, moisture, or external

Types of Ethernet Cable

3. Fiber Optic Cable Fiber optic cables use optical fibers which are made of glass cores surrounded by several layers of covering material generally made of PVC or Teflon. It transmits data

What Is Aerial Fiber Optic Cable? Types, Features & Applications

In the global expansion of optical communication networks—including FTTx access, rural telecom coverage, long-haul backbone links, and smart power grid construction—aerial fiber optic

Aerial Fiber Optic Cable – Types & Installation Tips

Discover aerial fiber optic cables including ADSS, Figure-8, and OPGW types. Learn key advantages and expert installation tips for reliable outdoor networks.

What Is Fiber Optic Cable?

Compared to wired cables, fiber optic cables provide higher bandwidth and transmit data over longer distances. Fiber optic cables support much of the world's internet, cable television, and
