Optical module switch model

Overview

1x8, 1x16 Fiber Optical Switches This 1x8 and 1x16 optical switches are ideal modules for applications requiring high optical switchi...

Key Takeaways

Optical module switches come in various models such as 1xN, NxN, MEMS, and opto-mechanical types, each designed for specific routing, testing, or network applications.

Types of Optical Switch Modules

Mechanical Optical Switches: Use micro-mirrors or fiber-optic rotary mechanisms to redirect light. They are reliable and cost-effective but have slower switching speeds, suitable for applications where speed is not critical.

MEM

S (Micro-Electro-Mechanical Systems) Optical Switches: Utilize tiny movable mirrors controlled by electrostatic forces. They offer fast switching, low power consumption, and high reliability, ideal for dynamic network setups, data centers, and telecommunication networks. Liquid Crystal (LC) Optical Switches: Employ liquid crystal materials to control light polarization.

They are compact, fast, and suitable for photonic integrated circuits and FTTH applications.

Opto-

Mechanical Switches: Often used in 1x1, 1x2, 1x4, 1x8, and 1x16 configurations, these switches provide proven reliability and low insertion loss, commonly applied in laboratory and industrial testing.

Common Models and Configurations1x

N Optical Switches: One input fiber connects to multiple output fibers, used for signal distribution, monitoring, and testing.

Nx

N Optical Switches: Multiple inputs to multiple outputs, enabling complex routing in dynamic networks. Protective Optical Switches: Provide redundancy and failover protection, automatically switching to backup paths in case of failure. OSW-M-1xN Modules: Programmable modules for automated testing, supporting multiple control methods (software, button, TRIG signal) with low insertion loss (

POLATIS Optical Switch Modules from 16x16 up to 48x48 Ports

POLATIS ® Series 6000 Optical Switch Modules (OSM) are high-performance, fully non-blocking all-optical matrix switch modules with port counts from 16xCC up to 48xCC, offering "any-to-any" port

Optical Switches

Designed for durability and precision, our optical switches support single-mode and multimode fiber types with low insertion loss, high return loss, and reliable repeatability. With support for various
