Price of replacing the glass in the distribution box

Overview

Key cost drivers include panel amperage, indoor vs outdoor location, wiring length, and whether a full panel upgrade or rerouting is needed.

Key Takeaways

Replacing the glass in a distribution box typically costs between $50 and $200, depending on labor and part availability.

Overview

Replacing just the glass in a distribution box is generally much cheaper than replacing the entire electrical panel, which can range from $850 to $4,500 depending on amperage, labor, and rewiring needs. The cost of a glass panel itself is relatively low, often between $20 and $75, but labor can increase the total price, especially if a licensed electrician is required to safely remove and reinstall the glass.

Factors Affecting Cost

Labor Rates: Electricians typically charge $50 to $150 per hour, and even a small repair like glass replacement may require 1–2 hours for safe handling. Panel Type and Size: Larger or older panels may require custom glass or additional safety precautions, increasing cost. Accessibility: Panels in tight or hard-to-reach locations may require more time, raising labor charges.

Regional Variations: Labor and permit costs vary by region, with some areas charging 5–15% more than the national average.

Practical Considerations

If the panel is older or has other issues, it may be more cost-effective to replace the entire panel rather than just the glass. Ensure the replacement glass meets safety standards and is compatible with your panel model. Hiring a licensed electrician is recommended to avoid electrical hazards, even for a seemingly minor repair.

In summary, expect to pay roughly $50–$200 for replacing the glass in a distribution box, with the final cost depending on labor, panel type, and local rates. This is significantly less than a full panel replacement, which can cost over $1,000 for standard residential systems.
