Router Fiber Port Module Electrical Port Module

Overview

SFP, SFP+, and QSFP modules are hot-swappable transceiver modules that plug into matching cages on switches, routers, network cards, and storage controllers. They convert between electrical signals inside the equipment and the optical or copper signals on the cable. With the launch of the new Wi-Fi 7 routers BE800 and BE900, our home routers have begun to utilize the high speeds that come with added SFP+ Compatibility. It offers several advantages, including hot-swappability, support for multiple transmission media and protocols, as well as flexibility and scalability. Think of it as the “translator” for your network equipment, converting electrical signals into optical signals. The Cisco ® 10GBASE SFP+ modules (Figure 1) give you a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider transport applications. Cisco SFP+ modules offer the following features and benefits.
