

Screen glare after using KVM switcher

Overview

If using DisplayPort or HDMI, opt for KVM switches that support the latest versions and have good reviews for compatibility. Artifacts and video distortion when using a KVM switch are often caused by signal integrity issues, improper EDID handling, or hardware. A KVM switch is a convenient tool that allows users to control multiple computers from a single keyboard, monitor, and mouse setup. However, while these devices can streamline workflows and reduce desk clutter, users sometimes report video artifacts or screen distortions when using a KVM switch. This can be frustrating, especially when your setup works perfectly most of the time, but these interruptions persist. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's. Every time the active computer changes, the operating system may temporarily believe the monitor has been disconnected and reconnected again. That's often where display problems begin. does it show up normal while directly connected to the laptop?

does it show up normal while directly connected to the laptop?

You are incredible! Since it was easiest, first thing I did was turn down the refresh rate to 60hz (though it says 59.99 in settings no clue why) and it worked! Appreciate. Please refer to the following suggestions for assistance: Please try connecting the problematic monitor directly to the computer (bypassing the KVM) and check if the problem persists.
