

Single-fiber bidirectional intelligent after-sales service

Overview

Optimize your fiber utilization with FS 10G BiDi SFP+ modules. Single-fiber 10G transmission, lower costs, high compatibility—ideal for data centers and telecom networks.

Key Takeaways

Single-fiber bidirectional (BiDi) optical modules enable full-duplex communication over a single fiber, reducing fiber usage and simplifying network maintenance while supporting intelligent after-sales monitoring.

Overview of Single-

Fiber Bidirectional Technology Single-fiber bidirectional (BiDi) optical modules use wavelength division multiplexing (WDM) to transmit and receive data simultaneously over a single fiber strand. Typically, two different wavelengths are used—for example, 1310 nm for transmission and 1550 nm for reception—allowing full-duplex communication without requiring a second fiber. This approach reduces fiber usage by up to 50%, lowers cabling costs, and simplifies network deployment, particularly in campus networks, metro rings, and data center interconnects.

Advantages for After-

Sales Service

Reduced Maintenance Complexity: Fewer fiber connections mean fewer potential failure points, which simplifies troubleshooting and fault isolation.

Real-

Time Monitoring: Many BiDi modules support Digital Diagnostic Monitoring (DDM), providing live data on temperature, voltage, and optical power, enabling proactive maintenance and faster response to network issues. Cost Efficiency: By halving fiber usage and reducing the number of ports and cables, operators save on installation, leasing, and ongoing maintenance costs. Compatibility and Flexibility: BiDi modules are compatible with standard SFP/SFP+ interfaces and can integrate with existing optical networks without hardware redesign, allowing seamless upgrades.

Intelligent After-

Sales Features

Remote Monitoring: Operators can track module performance and fiber quality remotely, reducing the need for on-site inspections. Fault Prediction and Alerts: Intelligent systems can detect potential fiber degradation or module issues before they impact service, improving uptime and reliability. Simplified Module Management: Unified management of parallel modules and standardized wavelength configurations reduce operational complexity and inventory requirements.

Implementation Considerations

Wavelength Coordination: BiDi modules must be paired correctly to ensure the transmit and receive wavelengths match, preventing interference. Distance and Protocol Support: Modules support various distances (up to 40 km or more) and protocols such as 10G Ethernet, CPRI, and eCPRI, making them suitable for high-performance networks. Operational Complexity: While BiDi reduces fiber usage, single-fiber bidirectional systems require careful wavelength management and protection configuration to avoid signal interference.

Conclusion

Deploying single-fiber bidirectional optical modules with intelligent after-sales service provides a cost-effective, space-saving, and reliable solution for modern optical networks. By combining real-time monitoring, predictive maintenance, and simplified management, network operators can maximize fiber utilization, reduce operational costs, and ensure high network availability.

Comprehensive Guide to FS 10G BiDi SFP Modules

Optimize your fiber utilization with FS 10G BiDi SFP+ modules. Single-fiber 10G transmission, lower costs, high compatibility—ideal for data centers and telecom networks.

The Complete Guide to BiDi Transceiver

BiDi technology optimizes bidirectional data transmission on a single fiber, thereby improving network efficiency, and it has demonstrated success across diverse industries,

Bi-Directional Optical Transceivers

Discover BiDi optical transceivers designed to transmit and receive data over a single fiber, maximizing existing infrastructure. These solutions help increase bandwidth capacity, reduce fiber requirements,

SFP modules – transceivers for 1/2/4G fibre channel

BiDi (Bidirectional) SFP – Single-fiber SFP modules for FTTH and fiber-efficient networking, allowing both transmit and receive signals to travel over a single

Cisco SFP Modules for Gigabit Ethernet Applications Data Sheet

The 1000BASE-LX/LH SFP, compatible with the IEEE 802.3z 1000BASE-LX standard, operates on standard single-mode fiber-optic link spans of up to 10 km and up to 550 m on any

Single-fiber Bidirectional Transceivers

Bidirectional transceivers transmit and receive optical signals through a single fiber, saving optical fiber resources. This is useful where fiber resources are scarce

Single Fiber Bidirectional SFP Transceivers

Single Fiber Bidirectional SFP transceivers use simplex single-mode fiber to double the bandwidth, data rates up to 4G and distances up to 160km.

Bi-Directional Single Fibre Digital Transceivers

Bi-directional (Bi-Di) transceivers allow a physical capacity doubling of existing installed legacy single mode fibre links.

BiDi Transceivers For Beyond 100G Fiber Infrastructure | RAD SFP

BiDi transceivers offer unprecedented fiber savings and network efficiency. Enhance 1G, to 200G fiber infrastructure with RAD SFP services.

Driving Industry Outcomes with Partner AI Solutions

Driving Industry Outcomes with Partner AI Solutions Databricks consulting and SI partners deliver ready-to-deploy, industry-specific GenAI solutions across financial services,
