The fiber optic router keeps showing a red light

Overview

In this comprehensive guide, we will walk you through the common causes of a red light on your router and provide step-by-step instructions on how to fix it.

Key Takeaways

A red fiber optic light on your router indicates a Loss of Signal (LOS), meaning your router is not receiving a proper optical signal from your ISP.

What the Red Light Means

The red LOS light signals that the fiber signal is missing, weak, or interrupted, preventing your router from connecting to the internet properly. This is different from Wi-Fi issues inside your home; it usually points to a problem with the fiber line or the connection to your ISP.

Common Causes

Fiber Cable Damage: Cuts, sharp bends, or crushed fiber cables can disrupt the signal. Loose or Improper Connections: Ensure the fiber patch cord is securely connected to the ONT/router and not bent sharply. Power Issues: The router or ONT may not be receiving stable power.

IS

P Service Outage: Maintenance or local outages can cause the LOS light to turn red.

Faulty Router or ON

T: Hardware or firmware issues may prevent proper signal reception.

Troubleshooting Steps

Check Power: Make sure both the router and ONT are powered on and stable. Inspect Fiber Cable: Look for bends, damage, or loose connections. Handle the fiber gently to avoid breakage.

Restart Devices: Power off the router and ONT, wait 20–30 seconds, then power them back on. Allow a few minutes for the signal to stabilize.

Check for IS

P Outages: Visit your ISP's website or social media pages to confirm if there is a service disruption.

Contact IS

P Support: If the red light persists after these steps, an on-site technician may be required to inspect the fiber line or replace faulty equipment.

Additional Tips

Avoid repeatedly bending or pulling the fiber cable. Keep the router in a well-ventilated area to prevent overheating, which can exacerbate connectivity issues. Regularly check for firmware updates via your router's admin panel or app.

By following these steps, you can often identify the root cause of the red LOS light and restore your internet connection. If the problem continues, professional assistance from your ISP is usually necessary.
