Types of Office Power Distribution Boxes

Overview

Distribution Boxes Types – The Complete Guide A commonly used distribution box contains doorbells, earth leakage devices, timers, or contact breakers. Howe.

Key Takeaways

Office power distribution boxes come in various types, including consumer units, sub-distribution boards, control boxes, and specialized lighting or power distribution panels, each designed to safely manage and distribute electricity to multiple circuits. Main Types of Distribution Boxes for Offices1. Main Distribution Board (MDB) The MDB acts as the central hub for electricity in an office, distributing power to sub-circuits and controlling overall load.

It typically includes bus bars, MCCBs, switches, and protective devices to prevent overloads and ensure safety. 2. Sub Distribution Board (SDB) SDBs receive power from the MDB and distribute it to specific areas such as office floors, meeting rooms, or server rooms.

They allow easier control and isolation of circuits for maintenance or emergencies. 3. Consumer Unit Common in office settings, consumer units contain fuses or circuit breakers and RCDs to protect circuits from overloads.

They are ideal for smaller office areas or individual departments. 4. Control Distribution Box These boxes integrate control components like relays, timers, and contactors, allowing offices to manage lighting, HVAC, or other automated systems efficiently.

5. Lighting Distribution Box Dedicated to lighting circuits, these boxes provide protection and centralized control for office lighting systems, ensuring safety and easy maintenance. 6.

Power Distribution Box Designed to supply power to office equipment, sockets, and heavy machinery, these boxes handle higher loads and often include multiple circuit breakers for different devices. Classification by Installation and MaterialIndoor vs OutdoorIndoor boxes are used in offices, utility rooms, or server rooms where environmental exposure is minimal. Outdoor boxes are built for exposed areas, with stronger enclosures and higher IP ratings to resist dust, rain, and temperature changes.

Material Types

Metal boxes (steel or aluminum) offer high mechanical strength and durability, suitable for commercial offices with higher safety requirements. Plastic boxes (PVC or polycarbonate) are lightweight, corrosion-resistant, and suitable for smaller office setups or light commercial use. Mounting OptionsWall-mounted: Common in offices for easy access and space-saving.

Floor-standing: Used for larger office systems requiring more circuits or higher load capacity. Flush-mounted: Embedded into walls for a clean, aesthetic appearance in modern office interiors.

Specialized Features

Some office distribution boxes may include manual or automatic transfer switches to manage backup power, ensuring uninterrupted operation of critical systems like servers or communication equipment. Modern boxes may also integrate monitoring systems for energy management and safety compliance. By selecting the appropriate type, material, and mounting style, offices can ensure efficient, safe, and reliable power distribution across all electrical circuits.
