What are some automated equipment options for cold splicing

Overview

Product features include digital auto-splicing, automatic low-riding festoons, direct load positioning for both the upper and lower rolls, automatic drive engagement, systems diagnostics, and audible splice signaling. Splice Technology feeds, cuts, forms, and splices connections quickly, eliminating the need for pre-formed crimps or high-maintenance alternatives like a fusion splicer.) on DirectIndustry, the industry specialist for your professional purchases. 0 splicing equipment, Ammeraal Beltech has leaped forward in the critical areas of the splicing process: high quality, efficiency, speed, precision, and ease of use. The Makita Plate Joiner (model PJ7000), combines power and precision with ease-of-use features for strong and accurate biscuit joints for furniture making, cabinet construction and fine woodworking applications. li>PowerBond: increases pressing force. The Auto Splicing Unit automatically performs splicing work traditionally performed manually. Also, occurrences of short stops can be reduced and high productivity is maintained. Just by inserting the old and new tapes.
