What are the Huawei AI server series

Overview

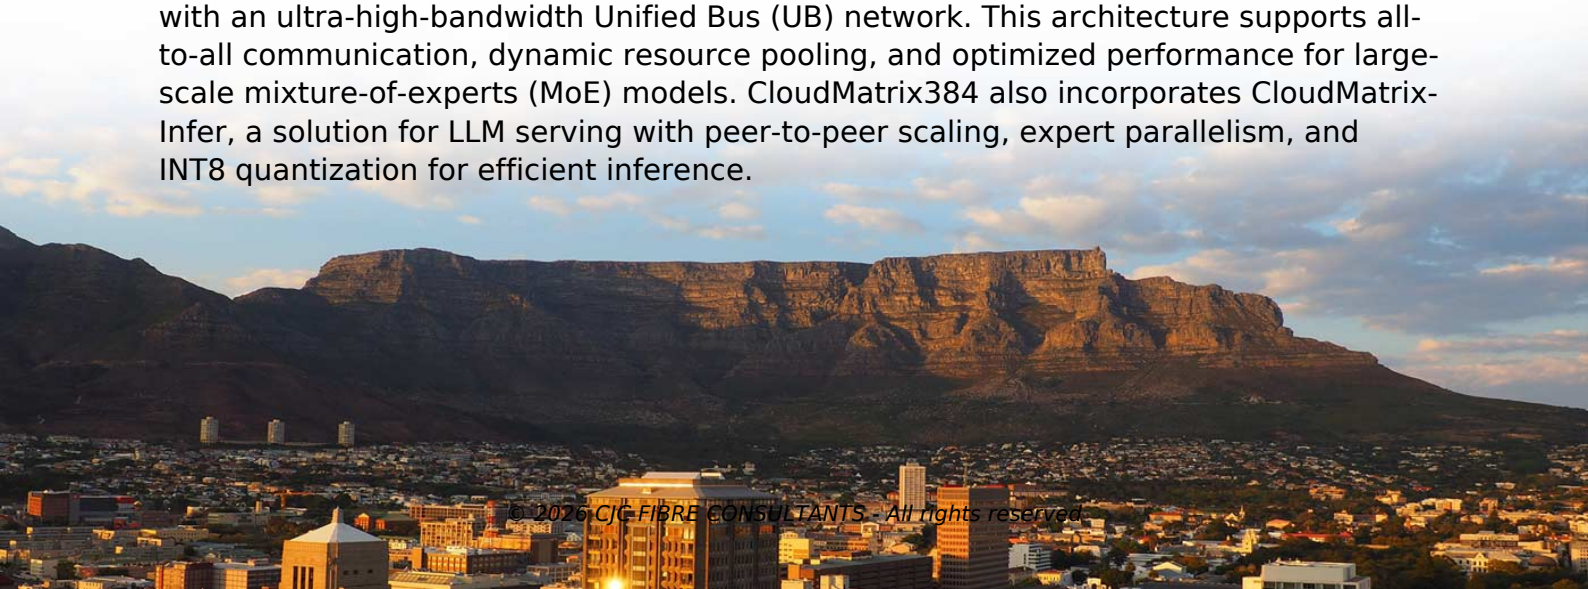

AI-accelerated ECSs, powered by Ascend processors and software stacks, are dedicated to accelerating AI applications.

Key Takeaways

Huawei's leading AI server models include the Atlas 950 and 960 SuperPoD servers, powered by Ascend 950/950PR AI chips, designed for ultra-large-scale AI workloads and LLM inference. Atlas 950 and 960 SuperPoD ServersHuawei's Atlas 950 and 960 SuperPoD servers are next-generation rack-scale AI clusters aimed at competing with NVIDIA's high-end AI systems. The Atlas 950 SuperPoD features 8,192 Ascend 950 AI chips, delivering 8 EFLOPS FP8 and 16 EFLOPS FP16 performance, with a total interconnect bandwidth of 16.

3 PB/s. These servers can be combined into the Atlas 950 SuperCluster, scaling up to 524,288 Ascend 950 chips, supporting between 500,000 and 1 million processors, making them among the largest AI compute clusters globally. The Atlas 960 is a further iteration designed for extreme scalability and high-performance AI workloads.

CloudMatrix384 ArchitectureThe CloudMatrix384 is Huawei's next-generation AI datacenter architecture, integrating 384 Ascend 910 NPUs and 192 Kunpeng CPUs with an ultra-high-bandwidth Unified Bus (UB) network. This architecture supports all-to-all communication, dynamic resource pooling, and optimized performance for large-scale mixture-of-experts (MoE) models. CloudMatrix384 also incorporates CloudMatrix-Infer, a solution for LLM serving with peer-to-peer scaling, expert parallelism, and INT8 quantization for efficient inference.

Ascend A

I ChipsHuawei's AI servers are powered by the Ascend 950 and 950PR chips. The Ascend 950PR delivers 1. 56 PFLOPS FP4 performance, with 112 GB HiBL 1.

0 memory and 1. 4 TB/s bandwidth, optimized for large language model inference. These chips use a monolithic die design, achieving high compute density and efficiency, and are compatible with CUDA-like software stacks to facilitate migration from other platforms.

The Ascend 950 series provides the backbone for Huawei's SuperPoD and CloudMatrix servers, enabling multi-petaflop AI training and inference.

AI Ecosystem and Software Integration

Huawei A

I servers integrate with ModelEngine and Ascend AI Cloud services, offering zero-code model deployment, fine-grained resource scheduling, and high utilization of xPU resources. The ecosystem supports trillion-parameter model training, multi-modal data processing, and knowledge memory platforms for ultra-scale inference, ensuring high throughput and low latency for enterprise AI applications. SummaryHuawei's AI server lineup, including Atlas 950/960 SuperPoD, CloudMatrix384, and Ascend 950/950PR chips, is designed for large-scale AI training and inference, particularly for LLMs and multi-petaflop workloads.

These servers combine massive compute power, high-bandwidth interconnects, and advanced software integration, positioning Huawei as a major competitor in the global AI infrastructure market.
