What model of intelligent power distribution cabinet is it

Overview

Intelligent precision power distribution system Overview: PLS-DP series of intelligent precision power distribution Cabinet series products include: power.

Key Takeaways

Intelligent power distribution cabinets come in various models, including rack-mounted, floor-standing, low-voltage, medium-voltage, and advanced PDUs with monitoring and remote management capabilities. Main Types of Intelligent Power Distribution Cabinets1.

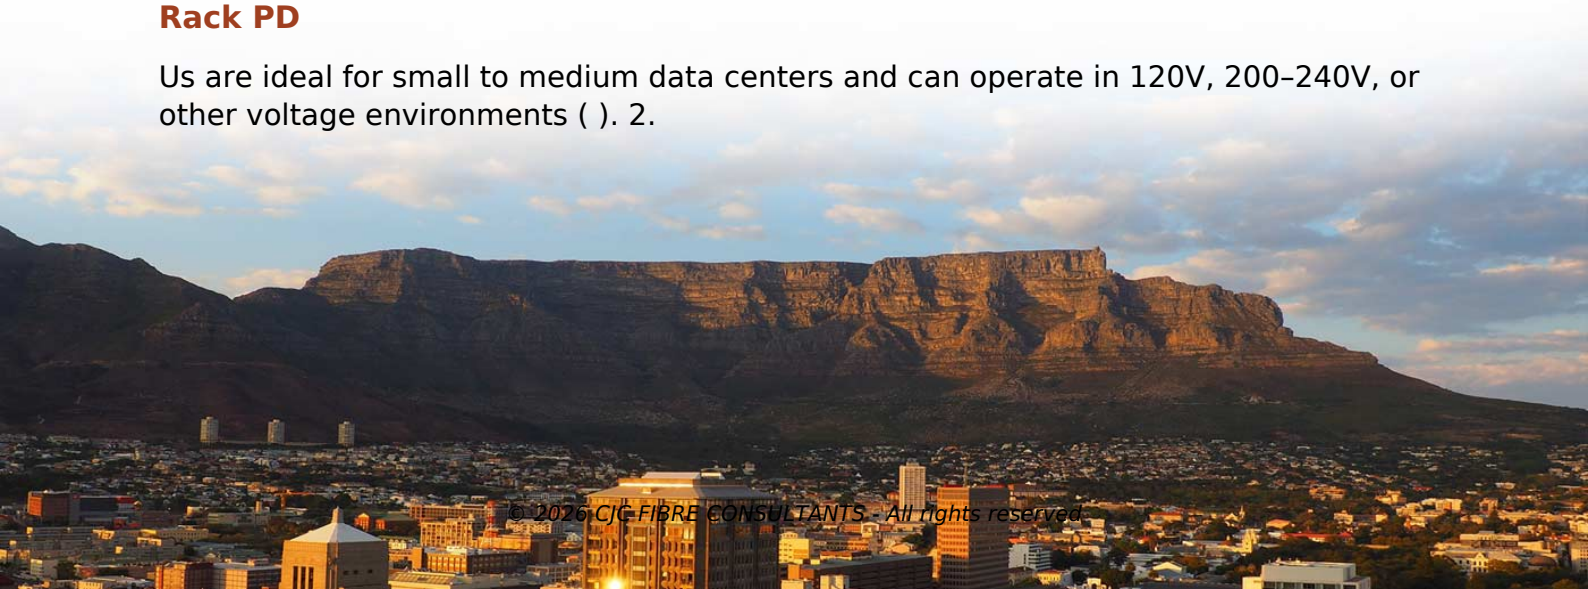

Rack-

Mounted PD

Us (Power Distribution Units) These are compact units designed to fit within server racks. They provide multiple outlets for IT equipment and often include intelligent features such as outlet-level metering, remote on/off control, and environmental monitoring for temperature, humidity, and airflow.

Rack PD

Us are ideal for small to medium data centers and can operate in 120V, 200–240V, or other voltage environments ( ). 2.

Floor-

Standing or Cabinet PDUs These are larger, three-phase units enclosed in their own cabinet, suitable for large data centers. They distribute power to multiple racks or groups of racks and often include branch circuit-level monitoring, voltage regulation, harmonic reduction, and isolation features. Examples include Eaton's PowerPak series (up to 1.

25 MVA) with Wavestar intelligent monitoring ( ). 3.

Low-

Voltage Distribution Cabinets Used in industrial and commercial applications, these cabinets handle voltages typically below 1 kV. They are designed for safe and reliable electricity distribution, often including circuit breakers, relays, busbars, and monitoring devices. They can be wall-mounted or floor-standing depending on space and load requirements ( ).

4.

Medium-

Voltage Distribution Cabinets These cabinets manage voltages from 1 kV to 35 kV and are commonly used in industrial plants, renewable energy systems, and large commercial buildings. They provide protection, control, and distribution of electricity with enhanced safety features and modular designs ( ). 5.

Intelligent or Networked PD

Us (iPDUs) These advanced models integrate remote monitoring, power metering at inlet, outlet, and branch circuit levels, and control over individual outlets. Some support IP consolidation, allowing multiple PDUs to be managed under a single IP address, and can integrate with electronic locks and environmental sensors. They are essential for optimizing uptime, energy efficiency, and load balancing in modern data centers ( ).

Key Features Across Models

Remote Management: Access and control power distribution via network interfaces. Metering: Monitor power usage at multiple levels (inlet, outlet, branch). Environmental Monitoring: Track temperature, humidity, and airflow.

Modular Design: Allows expansion or reconfiguration as power needs grow. Safety and Compliance: Built to meet IEC, IEEE, and ISO standards ( ).

Applications

Intelligent power distribution cabinets are widely used in data centers, industrial plants, commercial buildings, and renewable energy systems. They ensure reliable power delivery, protection against overloads, and efficient energy management, while supporting modern IoT and smart monitoring capabilities ( ). In summary, the choice of an intelligent power distribution cabinet depends on voltage requirements, installation type, monitoring needs, and the scale of the facility, ranging from compact rack-mounted PDUs to large floor-standing cabinets with advanced intelligent features.

Overview: PLS-DP series of intelligent precision power distribution Cabinet series products include: power, UPS input, output, counter, three varieties of Cabinet. It is not just a distribution Cabinet,

EL2P Intelligent Power Distribution Unit

Managing and installing a rack power distribution unit (PDU) has never been easier than with the EL2P PDU. Designed to simplify deployment and take stress out of

Power Switching and Distribution Cabinets

The Liebert® RXV remote power distribution cabinet provides dense power distribution in a small footprint, with up to 400 Amp inputs and 84 poles in a single 24”x12” panelboard.

Vertiv™ Liebert® PPC

Designed for high-density applications such as AI workloads, this power conditioning and distribution cabinet delivers the performance and reliability of a custom-engineered system with the efficiency

Power Distribution Cabinet

Modular design of distribution unit and detection unit for convenient expansionary and maintenance. 7 inch LCD, compatible with ZTE iDCIM data center management platform, realizing comprehensive

IPDM Intelligent Precision Cabinet – iTeaQ

IPDM intelligent precision cabinet is composed of the power distribution system, lightning arrester, computer-grade grounding compartment, and power monitoring system.
