What type of aluminum is used for cable trays

Overview

Comparing Electrical Cable Tray Materials-Aluminium, Aluminium, steel, or plastic?

Compare key features of electrical cable tray materials to find perfect.

Key Takeaways

6063-T6 aluminum is the most recommended material for cable trays due to its strength, corrosion resistance, and lightweight properties. Why 6063-T6 Aluminum is Preferred6063-T6 aluminum is widely used in cable tray manufacturing because it combines adequate structural strength with excellent corrosion resistance, making it suitable for both indoor and outdoor installations. This alloy is lightweight, which simplifies handling and installation, reduces labor costs, and minimizes the load on supporting structures.

Its non-magnetic properties also help minimize electrical losses, which is beneficial in electrical systems.

Key Advantages

Corrosion Resistance: 6063-T6 forms a natural oxide layer that protects against rust and environmental degradation, making it ideal for coastal or humid environments. Durability: The alloy is strong enough to support heavy cable loads without bending, while its self-healing oxide layer protects scratches from weakening the material. Ease of Fabrication: It can be extruded into various shapes and sizes, allowing for custom cable tray designs and perforated or ladder-style trays.

Maintenance-

Free: Unlike steel, it does not require coatings or galvanization to prevent corrosion, reducing long-term maintenance costs.

Considerations

While 6063-T6 aluminum is excellent for most applications, it is not as strong as steel, so it may not be suitable for extremely heavy-duty industrial loads. For such cases, steel or stainless steel trays may be preferred. However, for lightweight, corrosion-resistant, and electrically efficient installations, 6063-T6 aluminum remains the industry standard.

Summary

For most cable tray applications, especially where corrosion resistance, ease of installation, and electrical performance are priorities, 6063-T6 aluminum is the best choice. It balances strength, durability, and lightweight properties, making it ideal for commercial, industrial, and outdoor environments.

Comparing Electrical Cable Tray Materials-Aluminium,

Aluminium, steel, or plastic? Compare key features of electrical cable tray materials to find perfect match for your building''s requirements.

What is an Aluminum Cable Tray? A Professional Guide

A cable tray is made of the best material, the 6063-T6 aluminum. This particular form of metal is the most preferred metal in the industry since it is

Aluminum Cable Tray

Aluminum Cable Tray systems are lighter than steel cable tray and Certified CSA Cable Tray, UL listed, NEMA and certified. Because of their lighter weight aluminum cable trays are easier to install than

Types of Cable Trays: Ladder, Perforated, Basket, Solid & Channel

Explore all types of cable trays—ladder, perforated, basket, solid, and channel. Learn their uses, materials, pros, cons, and key differences.

Aluminium Cable Trays | EAE Electric

The aluminum cable tray is a lightweight, durable, and cost-effective solution used for organizing and safely carrying electrical and data cables. With easy installation and strong corrosion resistance, it is

Cable Tray Technical Guide A practical guide to product selection and ...

What is a cable tray ? ABB offers a number of different types of cable tray for use in a range of different applications and environments.

Complete Guide to Metal Cable Tray Materials in Industrial Applications

Common applications for aluminum cable trays include power plants, telecommunications, and commercial buildings where weight and corrosion resistance are priorities.

Aluminum Cable Tray | EAE USA

The aluminum cable tray is a lightweight, durable, and cost-effective solution used for organizing and safely carrying electrical and data cables. With easy installation and strong corrosion resistance, it is

What is Aluminium alloy Cable Tray?

Aluminum alloy cable trays are commonly used in commercial buildings, data centers, telecommunications infrastructure, and industrial facilities where their lightweight, corrosion

Type of Cable Tray Introduction Cable Tray Materials Electrical

Cable trays fabricated of extruded aluminium are used for their high strength to weight ratio, superior resistance to certain corrosive environments, and ease of installation.

What is Cable Tray and How it is used in Industrial applications?

What is Cable Tray? In electrical cabling, a cable tray is a metallic structure used to handle insulated electrical power distribution, control, and communication cables. A cable tray is

Cable Tray Systems

MP Husky Manufactures the following types of Cable Tray Systems: Aluminum, Mill Galvanized Steel, Hot-Dipped Galvanized Steel, Stainless Steel, Fiberglass,

Cable Size Calculator — Free, Fast & IEC/NEC Compliant

Free cable size calculator for single-phase and 3-phase systems. Enter current, length & install method — get mm² size, voltage drop & derating in

What Are The Common Types of Cable Trays

Discover the main types of cable trays, their uses, and how to choose the best one for your electrical or data cabling project in the UK.
