What type of cable tray is

Overview

This article explains each major cable tray type, how it works, and when it should be used, so users can make informed, standards-based decisions.

Key Takeaways

The types of cable trays include: Ladder Trays: Characterized by two side rails connected by rungs, allowing easy access to cables from the top and bottom. Perforated Trays: These trays have holes for ventilation and cable support, making them suitable for various applications.

Solid-

Bottom Trays: Provide a solid surface for cable support, ideal for protecting cables from dust and debris. Wire Mesh Trays: Made of woven wire, these trays are lightweight and allow for good airflow, suitable for light-duty applications. Channel Trays: These trays have a U-shaped design, providing a compact solution for cable management.

These types of cable trays are essential for supporting and protecting electrical cables in various installations.
