What type of socket is suitable for a distribution box

Overview

Selection Recommendations for Industrial Plugs, The Anssin IPS series of industrial standard plugs, sockets, and distribution boxes feature advanced design.

Key Takeaways

Flush-mounted industrial or plug-in type sockets with appropriate current rating and IP protection are suitable for installation in distribution boxes. Socket Types for Distribution Boxes1.

Flush-

Mounted Sockets: These sockets are installed by making openings in the distribution box enclosure and are ideal for indoor or controlled environments. They cannot serve as live terminals on their own; only the associated connectors carry live current. Flush-mounted sockets are commonly used in distribution boxes for stage lighting, audio equipment, and industrial control systems, providing a neat and safe installation.

2.

Surface-

Mounted Sockets: These are mounted directly on the wall or the surface of the distribution box. They are easier to access and maintain, suitable for factory power distribution, server rooms, and exhibition halls. Surface-mounted sockets require sufficient space for plugging and unplugging and are often used in industrial environments.

3.

Plug-

In Type Circuit Breaker Sockets: For distribution boxes that house circuit breakers, plug-in type sockets are recommended. These sockets feature specialized clips that snap directly onto the busbar inside the distribution box, ensuring secure electrical contact and easy installation or replacement.

Key Considerations

Current Rating: Industrial sockets typically come in 16A, 32A, 63A, and 125A ratings. Choose a socket that matches the load requirements of the circuits in the distribution box. Voltage Rating: Common industrial voltages include 110V, 220V, and 380V, with 220V (blue) and 380V (red) being standard for many applications.

Pin Configuration: Sockets are available in 3-pin, 4-pin, and 5-pin configurations depending on single-phase or three-phase power requirements. Ingress Protection (IP): For indoor distribution boxes, IP44 is sufficient, protecting against water spray and solid objects over 1mm. For outdoor or harsh environments, IP67 sockets are recommended, offering dust-tight and temporary immersion protection.

Material and Durability: Sockets should be compatible with the distribution box material, such as polycarbonate, ASA, or stainless steel, and withstand mechanical and environmental stress.

Summary

For safe and reliable installation in a distribution box, flush-mounted or plug-in type industrial sockets with the correct current, voltage, pin configuration, and IP rating should be selected. Surface-mounted sockets can be used where accessibility is a priority. Always ensure that the socket type matches the distribution box design and the intended electrical load to maintain safety and compliance with electrical standards.
