Zinc-plated cable trays for low-voltage electrical applications

Overview

Electric Zinc Plated Ventilated Cable Trays Shop high-quality electric zinc plated ventilated cable trays for reliable cable support. Find durable, factory.

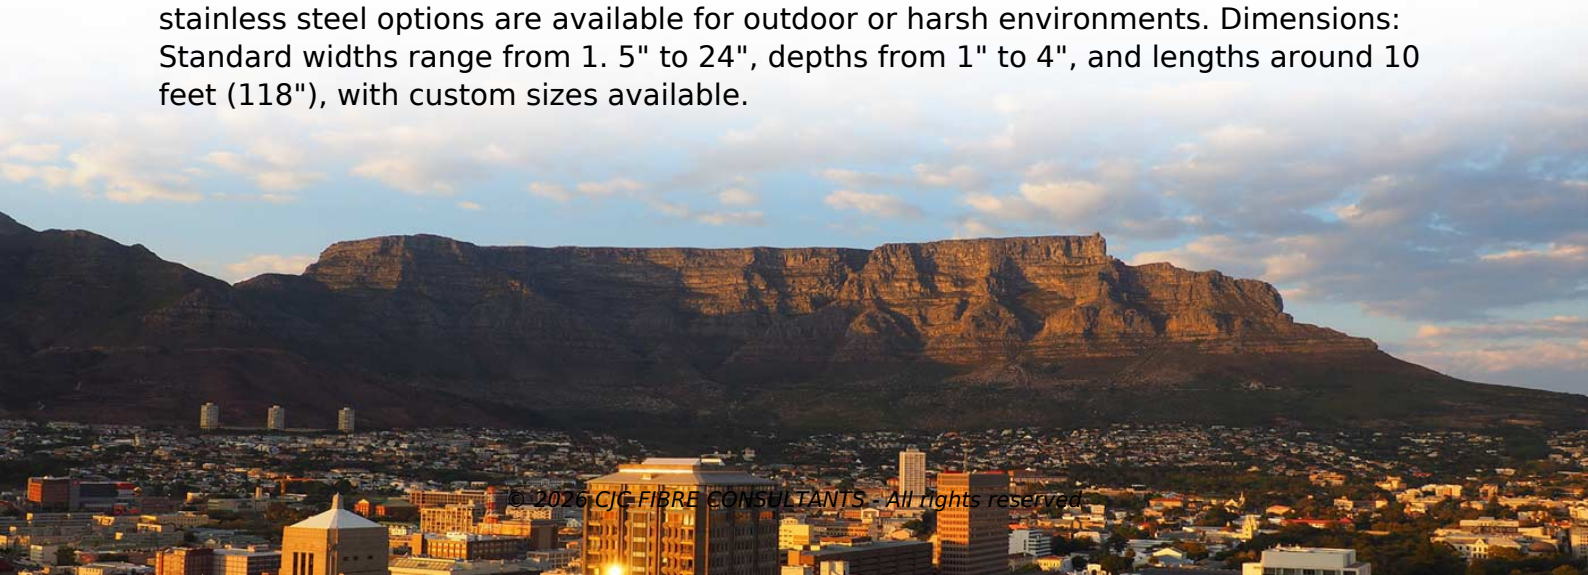

Key Takeaways

Zinc-plated wire mesh cable trays are ideal for indoor low-voltage applications, offering corrosion resistance, flexibility, and easy installation for telecommunication and fiber optic cables. OverviewZinc-plated cable trays, also known as wire mesh or wire basket trays, are primarily used for low-voltage telecommunication, data, and fiber optic cabling. The electro zinc plating provides a protective layer against corrosion for indoor environments, typically 12 microns thick according to BS EN 12329-2000 standards.

These trays are lightweight, durable, and allow for efficient air circulation, which helps prevent overheating of cables.

Key Features

Material and Finish: Electro zinc-plated steel for indoor use; hot-dipped galvanized or stainless steel options are available for outdoor or harsh environments. Dimensions: Standard widths range from 1. 5" to 24", depths from 1" to 4", and lengths around 10 feet (118"), with custom sizes available.

Load Capacity: Designed to support multiple low-voltage cables, with some trays accommodating up to 600 cables depending on size. Installation: Can be mounted on walls, ceilings, or under raised flooring using trapeze, wall, floor, or channel supports. Short support spans of 4 to 8 feet are typical.

Flexibility: Wire mesh trays can be cut, bent, or configured into tees, elbows, crosses, and risers on-site, allowing for adaptable routing. Safety: Features like Safe-T-Edge design protect cables from damage, and the trays are strong enough to withstand short circuits.

Advantages for Low Voltage Applications

Corrosion Resistance: Zinc plating protects against indoor moisture and chemical exposure. Lightweight and Easy to Handle: Simplifies installation and reduces labor costs. Good Ventilation: Open mesh design allows heat dissipation, preventing cable overheating.

Maintenance Friendly: Easy to inspect, clean, and secure cables with ties or clamps. Compliance: Meets relevant European standards for indoor cable management.

Applications

Telecommunication networksFiber optic installationsData centers and server roomsCommercial and industrial low-voltage wiring Zinc-plated wire mesh cable trays are a cost-effective, durable, and versatile solution for organizing and protecting low-voltage cables indoors, ensuring both safety and efficient cable management.
